Get The Best Varieties At The Best Price !

www.spainseeds.com

WHY SHOULD I CHOOSE...

- Because we are a reliable seed bank, with many years of experience. Our seeds undergo strict quality controls, in order to avoid problems such as selling non-auto when autos have been requested by a customer, or selling hemp seeds when medical cannabis seeds have been requested.

- Because of our price and reliability. Agreements with us guarantee your supply, and the high volumes we deal with guarantees you a better price.

- We keep a high level of fresh seeds stock, and we don't give you a wooden nickel. Seeds older than one year go to the secondary market.

- We grow our own seeds and we control their quality. We work directly with growers, without middle men. That's why we can offer the greatest price/quality ratio.

- Every generation of our seeds is better than the previous, thanks to number of plants we use for selection. We have a program of crossing controlled by an agronomy engineer, so to guarantee hybrid strength avoiding endogamy.

SPANISH SEEDS?

- In our facilities we carry out a careful hand-made selection, complying with demanding quality standards; there are no white ones, no small ones. We carry out cleaning treatments and our seeds are insect-free and fungus-free.

- We are plainspoken and transparent when it comes to our products. We can give you all the data of our genetic: we don't hide the complete genetic, we don't simply give the brand name. If we run out of stock, we will not give you a variety instead of another as (unfortunately), is often the case in this sector.

- We can count on professional tools and a multi-disciplinary staff, among which we have agronomy engineers and biologists. They use state-of-the-art technologies, as continuous development with the gas chromatograph and gene sequencing our efforts are concentrated in I+D+I and we cooperate with UPV (Polytechnical University of Valencia).

- Because of reliability. We have been in the market for 20 years and we want to stay in the market, that's why we do things right: we have a long corporate history with no incidents.

- We are specialists in seeds for professionals. We adapt to the needs and preferences of the user. We make the seeds that you bank needs.

SPANISH SEEDS

SEEDS SELECTION

Hand-made careful process of selection with high quality standards.

SIEVE

Through the sieve we sift the seeds, and we only choose those with a caliber of at least 0,2 mm.

SCREENING

Through the sieve we sift the seeds, and we only choose those with a caliber of at least 0,2 mm. Once selected they go on to the machines of counted

SILICA / STORAGE

When the batch has been purified seed by seed, and waiting for the germination test results, seeds are stored in silica gel in order to control humidity.

WORKING METHOD

If test results are good, seeds are taken to a cold storage area where they are kept with the appropriate humidity and temperature values.

GERMINATION TEST

We never sell our seeds below 97 % of germination.

FUNGUS TREATMENT

We guarantee seeds properties; when it is the case, they undergo an anti-fungus treatment in a water-based solution during no more than 2 minutes. They are then immediately dried out in cellulose.

SPANISH SEEDS

FILLING MACHINES SEALING MACHINES

In the final phase, our seeds are packaged and sealed to arrive to the customer in the best conditions.

WORKING METHOD

RESEARCH & DEVELOPMENT

R&D is a constant process of ours. Samples are used for laboratory analysis with the gas chromatograph or using other techniques such as genetic sequencing.
